

## Table of Contents

### Preface

### 1 Introduction

#### 1.1 Optics, Information, and Communication

#### 1.2 The Book

#### 1.2 Analysis of Two-Dimensional Signals and Systems

#### 2.1 Fourier Analysis in Two Dimensions

##### 2.1.1 Definition and Existence Conditions

##### 2.1.2 The Fourier Transform as a Decomposition

##### 2.1.3 Fourier Transform Theorems

##### 2.1.4 Separable Functions

##### 2.1.5 Functions with Circular Symmetry: Fourier-Bessel Transforms

##### 2.1.6 Some Frequently Used Functions and Some Useful Fourier Transform Pairs

#### 2.2 Spatial Frequency and Space-Frequency Localization

#### 2.3 Linear Systems

##### 2.3.1 Linearity and the Superposition Integral

##### 2.3.2 Invariant Linear Systems: Transfer Functions

#### 2.4 Two-Dimensional Sampling Theory

##### 2.4.1 The Whittaker-Shannon Sampling Theorem

##### 2.4.2 Space-Bandwidth Product

### 3 Foundations of Scalar Diffraction Theory

#### 3.1 Historical Introduction

#### 3.2 From a Vector to a Scalar Theory

#### 3.3 Some Mathematical Preliminaries

##### 3.3.1 The Helmholtz Equation

##### 3.3.2 Green's Theorem

##### 3.3.3 The Integral Theorem of Helmholtz and Kirchhoff

#### 3.4 Kirchhoff Formulation

##### 3.4.1 Application of the Integral Theorem

##### 3.4.2 The Kirchhoff Boundary Conditions

##### 3.4.3 The Fresnel-Kirchhoff Diffraction Formula

#### 3.5 The Rayleigh-Sommerfeld Formulation of Diffraction

##### 3.5.1 Choice of Alternative Green's Functions

##### 3.5.2 The Rayleigh-Sommerfeld Diffraction Formula

- 3.6 Comparison of the Kirchhoff and Rayleigh-Sommerfeld Theories
- 3.7 Further Discussion of the Huygens-Fresnel Principle
- 3.8 Generalization to Nonmonochromatic Waves
- 3.9 Diffraction at Boundaries
- 3.10 The Angular Spectrum of Plane Waves
  - 3.10.1 The Angular Spectrum and Its Physical Interpretation
  - 3.10.2 Propagation of the Angular Spectrum
  - 3.10.3 Effects of a Diffracting Aperture on the Angular Spectrum
  - 3.10.4 The Propagation Phenomenon as a Linear Spatial Filter

## 4 Fresnel and Fraunhofer Diffraction

- 4.1 Background
  - 4.1.1 The Intensity of a Wave Field
  - 4.1.2 The Huygens-Fresnel Principle in Rectangular Coordinates
- 4.2 The Fresnel Approximation
  - 4.2.1 Positive vs. Negative Phases
  - 4.2.2 Accuracy of the Fresnel Approximation
  - 4.2.3 The Fresnel Approximation and the Angular Spectrum
  - 4.2.4 Fresnel Diffraction between Confocal Spherical Surfaces
- 4.3 The Fraunhofer Approximation
- 4.4 Examples of Fraunhofer Diffraction Patterns
  - 4.4.1 Rectangular Aperture
  - 4.4.2 Circular Aperture
  - 4.4.3 Thin Sinusoidal Amplitude Grating
  - 4.4.4 Thin Sinusoidal Phase Grating
- 4.5 Examples of Fresnel Diffraction Calculations
  - 4.5.1 Fresnel Diffraction by a Square Aperture
  - 4.5.2 Fresnel Diffraction by a Sinusoidal Amplitude Grating—Talbot Images

## 5 Wave-Optics Analysis of Coherent Optical Systems

- 5.1 A Thin Lens as a Phase Transformation
  - 5.1.1 The Thickness Function
  - 5.1.2 The Paraxial Approximation
  - 5.1.3 The Phase Transformation and Its Physical Meaning
- 5.2 Fourier Transforming Properties of Lenses
  - 5.2.1 Input Placed against the Lens
  - 5.2.2 Input Placed in Front of the Lens
  - 5.2.3 Input Placed behind the Lens

- 5.2.4 Example of an Optical Fourier Transform
- 5.3 Image Formation: Monochromatic Illumination
  - 5.3.1 The Impulse Response of a Positive Lens
  - 5.3.2 Eliminating Quadratic Phase Factors: The Lens Law
  - 5.3.3 The Relation between Object and Image
- 5.4 Analysis of Complex Coherent Optical Systems
  - 5.4.1 An Operator Notation
  - 5.4.2 Application of the Operator Approach to Some Optical Systems

## 6 Frequency Analysis of Optical Imaging Systems

- 6.1 Generalized Treatment of Imaging Systems
  - 6.1.1 A Generalized Model
  - 6.1.2 Effects of Diffraction on the Image
  - 6.1.3 Polychromatic Illumination: The Coherent and Incoherent Cases
- 6.2 Frequency Response of Coherent Imaging
  - 6.2.1 The Amplitude Transfer Function
  - 6.2.2 Examples of Amplitude Transfer Functions
- 6.3 Frequency Response for Incoherent Imaging
  - 6.3.1 The Optical Transfer Function
  - 6.3.2 General Properties of the OTF
  - 6.3.3 The OTF of an Aberration-Free System
  - 6.3.4 Examples of Diffraction-Limited OTFs
- 6.4 Aberrations and Their Effects on Frequency Response
  - 6.4.1 The Generalized Pupil Function
  - 6.4.2 Effects of Aberrations on the Amplitude Transfer Function
  - 6.4.3 Effects of Aberrations on the OTF
  - 6.4.4 Example of a Simple Aberration: A Focusing Error
  - 6.4.5 Apodization and Its Effects on Frequency Response
- 6.5 Comparison of Coherent and Incoherent Imaging
  - 6.5.1 Frequency Spectrum of the Image Intensity
  - 6.5.2 Two-Point Resolution
  - 6.5.3 Other Effects
- 6.6 Resolution beyond the Classical Diffraction Limit
  - 6.6.1 Underlying Mathematical Fundamentals
  - 6.6.2 Intuitive Explanation of Bandwidth Extrapolation
  - 6.6.3 An Extrapolation Method Based on the Sampling Theorem
  - 6.6.4 An Iterative Extrapolation Method
  - 6.6.5 Practical Limitations

## 7 Wavefront Modulation

### 7.1 Wavefront Modulation with Photographic Film

#### 7.1.1 The Physical Processes of Exposure, Development, and Fixing

#### 7.1.2 Definition of Terms

#### 7.1.3 Film in an Incoherent Optical System

#### 7.1.4 Film in a Coherent Optical System

#### 7.1.5 The Modulation Transfer Function

#### 7.1.6 Bleaching of Photographic Emulsions

### 7.2 Spatial Light Modulators

#### 7.2.1 Properties of Liquid Crystals

#### 7.2.2 Spatial Light Modulators Based on Liquid Crystals

#### 7.2.3 Magneto-Optic Spatial Light Modulators

#### 7.2.4 Deformable Mirror Spatial Light Modulators

#### 7.2.5 Multiple Quantum Well Spatial Light Modulators

#### 7.2.6 Acousto-Optic Spatial Light Modulators

### 7.3 Diffractive Optical Elements

#### 7.3.1 Binary Optics

#### 7.3.2 Other Types of Diffractive Optics

#### 7.3.3 A Word of Caution

## 8 Analog Optical Information Processing

### 8.1 Historical Background

#### 8.1.1 The Abbe-Porter Experiments

#### 8.1.2 The Zernike Phase-Contrast Microscope

#### 8.1.3 Improvement of Photographs: Maréchal

#### 8.1.4 The Emergence of a Communications Viewpoint

#### 8.1.5 Application of Coherent Optics to More General Data Processing

### 8.2 Incoherent Image Processing Systems

#### 8.2.1 Systems Based on Geometrical Optics<sup>8</sup>

#### 8.2.2 Systems That Incorporate the Effects of Diffraction

### 8.3 Coherent Optical Information Processing Systems

#### 8.3.1 Coherent System Architectures

#### 8.3.2 Constraints on Filter Realization

### 8.4 The VanderLugt Filter

#### 8.4.1 Synthesis of the Frequency-Plane Mask

#### 8.4.2 Processing the Input Data

#### 8.4.3 Advantages of the VanderLugt Filter

### 8.5 The Joint Transform Correlator

### 8.6 Application to Character Recognition

- 8.6.1 The Matched Filter
- 8.6.2 A Character-Recognition Problem
- 8.6.3 Optical Synthesis of a Character-Recognition Machine
- 8.6.4 Sensitivity to Scale Size and Rotation
- 8.7 Optical Approaches to Invariant Pattern Recognition
  - 8.7.1 Mellin Correlators
  - 8.7.2 Circular Harmonic Correlation
  - 8.7.3 Synthetic Discriminant Functions
- 8.8 Image Restoration
  - 8.8.1 The Inverse Filter
  - 8.8.2 The Wiener Filter, or the Least-Mean-Square-Error Filter
  - 8.8.3 Filter Realization
- 8.9 Processing Synthetic-Aperture Radar (SAR) Data
  - 8.9.1 Formation of the Synthetic Aperture
  - 8.9.2 The Collected Data and the Recording Format
  - 8.9.3 Focal Properties of the Film Transparency
  - 8.9.4 Forming a Two-Dimensional Image
  - 8.9.5 The Tilted Plane Processor
- 8.10 Acousto-Optic Signal Processing Systems
  - 8.10.1 Bragg Cell Spectrum Analyzer
  - 8.10.2 Space-Integrating Correlator
  - 8.10.3 Time-Integrating Correlator
  - 8.10.4 Other Acousto-Optic Signal Processing Architectures
- 8.11 Discrete Analog Optical Processors
  - 8.11.1 Discrete Representation of Signals and Systems
  - 8.11.2 A Serial Matrix-Vector Multiplier
  - 8.11.3 A Parallel Incoherent Matrix-Vector Multiplier
  - 8.11.4 An Outer Product Processor
  - 8.11.5 Other Discrete Processing Architectures
  - 8.11.6 Methods for Handling Bipolar and Complex Data

## 9 Holography

- 9.1 Historical Introduction
- 9.2 The Wavefront Reconstruction Problem
  - 9.2.1 Recording Amplitude and Phase
  - 9.2.2 The Recording Medium Integre
  - 9.2.3 Reconstruction of the Original Wavefront
  - 9.2.4 Linearity of the Holographic Process
  - 9.2.5 Image Formation by Holography

- 9.3 The Gabor Hologram
  - 9.3.1 Origin of the Reference Wave
  - 9.3.2 The Twin Images
  - 9.3.3 Limitations of the Gabor Hologram
- 9.4 The Leith-Upatnieks Hologram
  - 9.4.1 Recording the Hologram
  - 9.4.2 Obtaining the Reconstructed Images
  - 9.4.3 The Minimum Reference Angle
  - 9.4.4 Holography of Three-Dimensional Scenes
  - 9.4.5 Practical Problems in Holography
- 9.5 Image Locations and Magnification
  - 9.5.1 Image Locations
  - 9.5.2 Axial and Transverse Magnifications
  - 9.5.3 An Example
- 9.6 Some Different Types of Holograms
  - 9.6.1 Fresnel, Fraunhofer, Image, and Fourier Holograms
  - 9.6.2 Transmission and Reflection Holograms
  - 9.6.3 Holographic Stereograms
  - 9.6.4 Rainbow Holograms
  - 9.6.5 Multiplex Holograms
  - 9.6.6 Embossed Holograms
- 9.7 Thick Holograms
  - 9.7.1 Recording a Volume Holographic Grating
  - 9.7.2 Reconstructing Wavefronts from a Volume Grating
  - 9.7.3 Fringe Orientations for More Complex Recording Geometries
  - 9.7.4 Gratings of Finite Size
  - 9.7.5 Diffraction Efficiency—Coupled Mode Theory
- 9.8 Recording Materials
  - 9.8.1 Silver Halide Emulsions
  - 9.8.2 Photopolymer Films
  - 9.8.3 Dichromated Gelatin
  - 9.8.4 Photorefractive Materials
- 9.9 Computer-Generated Holograms
  - 9.9.1 The Sampling Problem
  - 9.9.2 The Computational Problem
  - 9.9.3 The Representational Problem
- 9.10 Degradations of Holographic Images
  - 9.10.1 Effects of Film MTF
  - 9.10.2 Effects of Film Nonlinearities

- 9.10.3 Effects of Film-Grain Noise
- 9.10.4 Speckle Noise
- 9.11 Holography with Spatially Incoherent Light
- 9.12 Applications of Holography
  - 9.12.1 Microscopy and High-Resolution Volume Imagery
  - 9.12.2 Interferometry
  - 9.12.3 Imaging through Distorting Media
  - 9.12.4 Holographic Data Storage
  - 9.12.5 Holographic Weights for Artificial Neural Networks
  - 9.12.6 Other Applications

## 10 Fourier Optics in Optical Communications

- 10.1 Introduction
- 10.2 Fiber Bragg Gratings
  - 10.2.1 Introduction to Optical Fibers
  - 10.2.2 Recording Gratings in Optical Fibers
  - 10.2.3 Effects of an FBG on Light Propagating in the Fiber
  - 10.2.4 Applications of FBGs
  - 10.2.5 Gratings Operated in Transmission
- 10.3 Ultrashort Pulse Shaping and Processing
  - 10.3.1 Mapping of Temporal Frequencies to Spatial Frequencies
  - 10.3.2 Pulse Shaping System
  - 10.3.3 Applications of Spectral Pulse Shaping
- 10.4 Spectral Holography
  - 10.4.1 Recording the Hologram
  - 10.4.2 Reconstructing the Signals
  - 10.4.3 Effects of Delay between the Reference Pulse and the Signal Waveform
- 10.5 Arrayed Waveguide Gratings
  - 10.5.1 Component Parts of an Arrayed Waveguide Grating
  - 10.5.2 Applications of AWGs

## A Delta Functions and Fourier Transform Theorems

- A.1 Delta Functions
- A.2 Derivation of Fourier Transform Theorems

## B Introduction to Paraxial Geometrical Optics

- B.1 The Domain of Geometrical Optics
- B.2 Refraction, Snell's Law, and the Paraxial Approximation
- B.3 The Ray-Transfer Matrix
- B.4 Conjugate Planes, Focal Planes, and Principal Planes
- B.5 Entrance and Exit Pupils

## C Polarization and Jones Matrices

### C.1 Definition of the Jones Matrix

### C.2 Examples of Simple Polarization Transformations

### C.3 Reflective Polarization Devices

## D The Grating Equation

## Bibliography

## Index
